

Week 3

C++ Environment, IDE Installation and Tool Setup

1. Objective

The objective of this practical is to install and set up a C++ programming environment on a Windows computer using **Dev-C++ IDE**.

The practical aims to:

- Understand the C++ development environment.
- Download and install Dev-C++ on Windows.
- Configure the IDE for C++ programming.
- Create and run a simple C++ program.

2. Software/Requirements

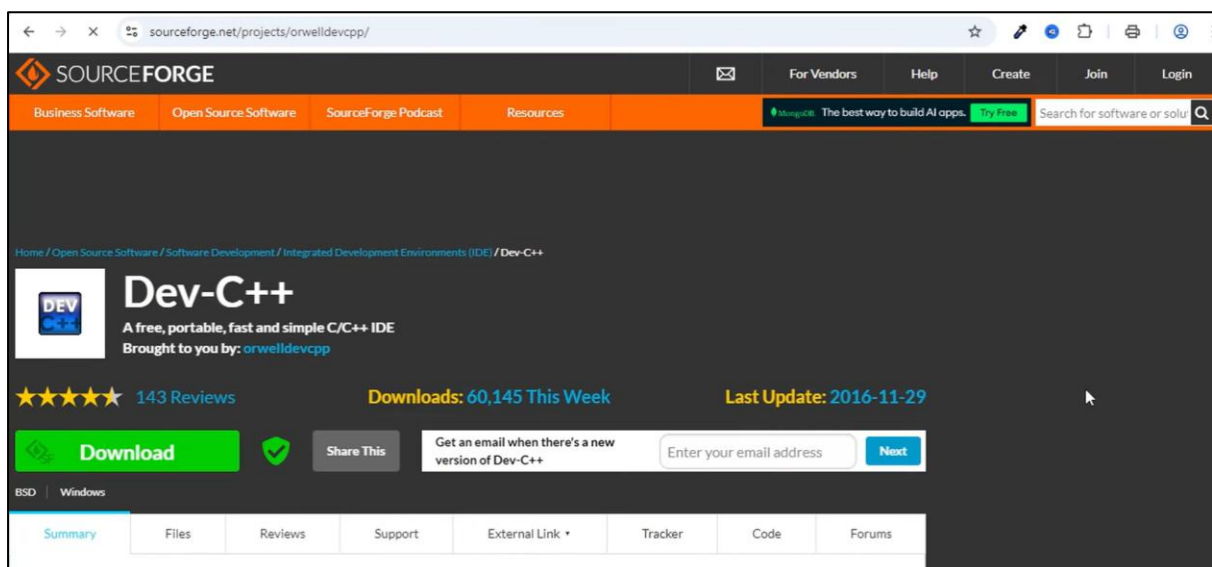

- Operating System: **Windows**
- IDE: **Dev-C++**
- C++ Compiler: **MinGW/GCC compiler included with Dev-C++**

3. Downloading Dev-C++ on Windows

Step 1: Open the Dev-C++ Download Page

Open a web browser and visit the official/source download page for Dev-C++.

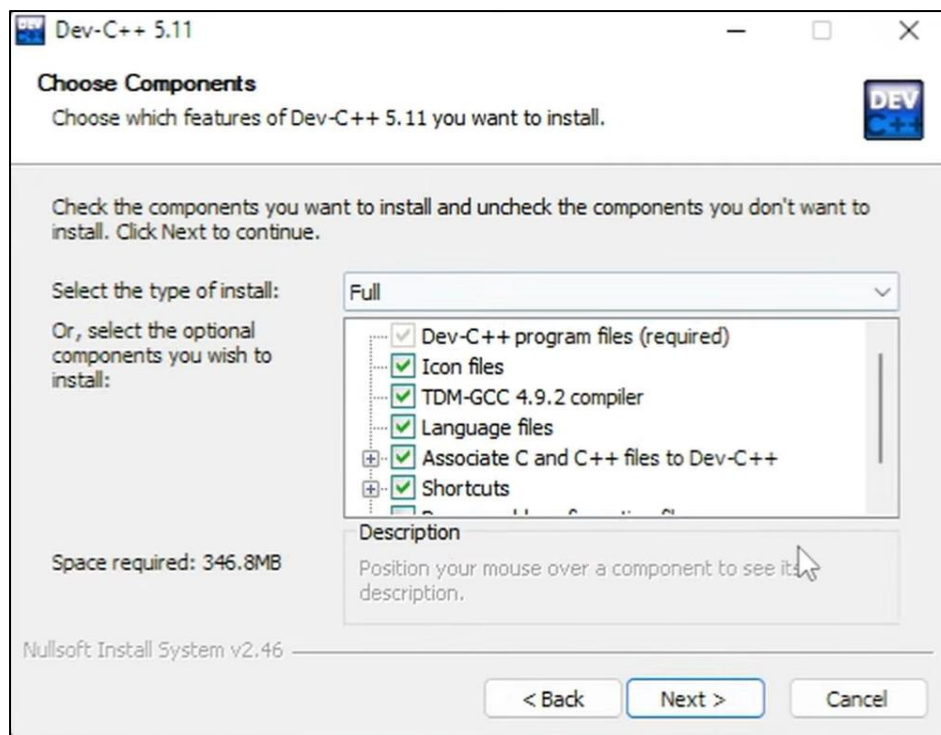

Screenshot 1: Dev-C++ download page

Step 2: Download the Dev-C++ Installer

Select the appropriate Dev-C++ installer for Windows and start the download.

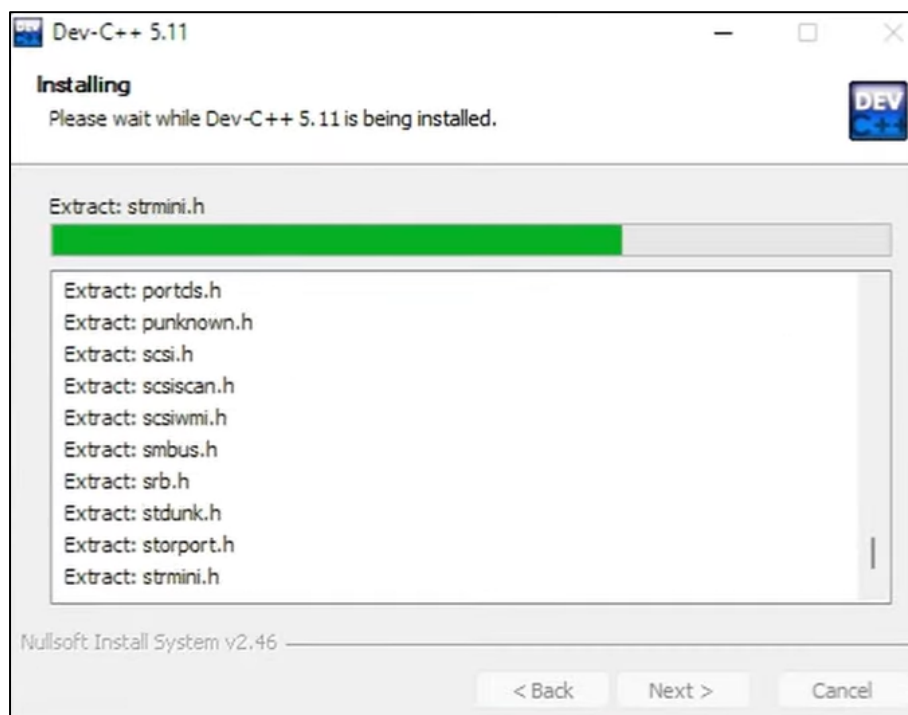

Screenshot 2: Downloading Dev-C++ installer

Step 3: Install Dev-C++

After downloading the installer, open the downloaded setup file. Follow the installation instructions displayed on the screen and complete the installation.

Screenshot 3: Dev-C++ installation/setup

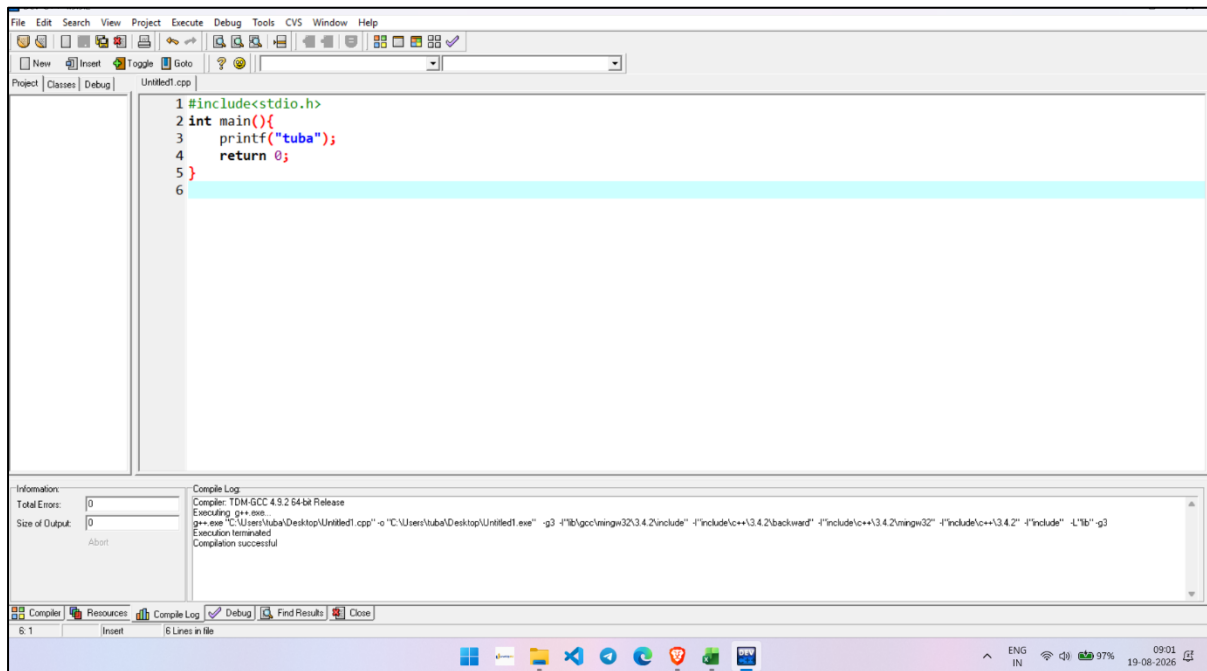

Step 4: Launch Dev-C++ and Creating a C++ Program

After successful installation, open Dev-C++ from the Windows Start Menu or desktop shortcut.

The Dev-C++ IDE provides an environment for writing, compiling, debugging, and executing C++ programs.

Screenshot 4: Dev-C++ IDE after installation

5. Compiling and Running the Program

Compile the program using the **Compile** option in Dev-C++.

After successful compilation, run the program using the **Run** option.

The output should be displayed in the console window.

6. Result

Dev-C++ was successfully downloaded and installed on the Windows operating system. The C++ development environment was set up successfully, and a simple C++ program was created, compiled, and executed.

7. Conclusion

The practical provided an introduction to the C++ development environment and the installation of Dev-C++ on Windows. The basic process of creating, compiling, and running a C++ program using the Dev-C++ IDE was also understood.
